

## Editing pricing buttons in FrameSmartv6.0

You can add/change/remove or move the existing buttons on your screen by clicking on the top corner button of each pricing paddock (button area), and editing each button, or adding new ones as appropriate.

As an example, to change the cost price of Clear Glass, clear the screen first, then click on the **Glass** button at the top-left of the Glass paddock.

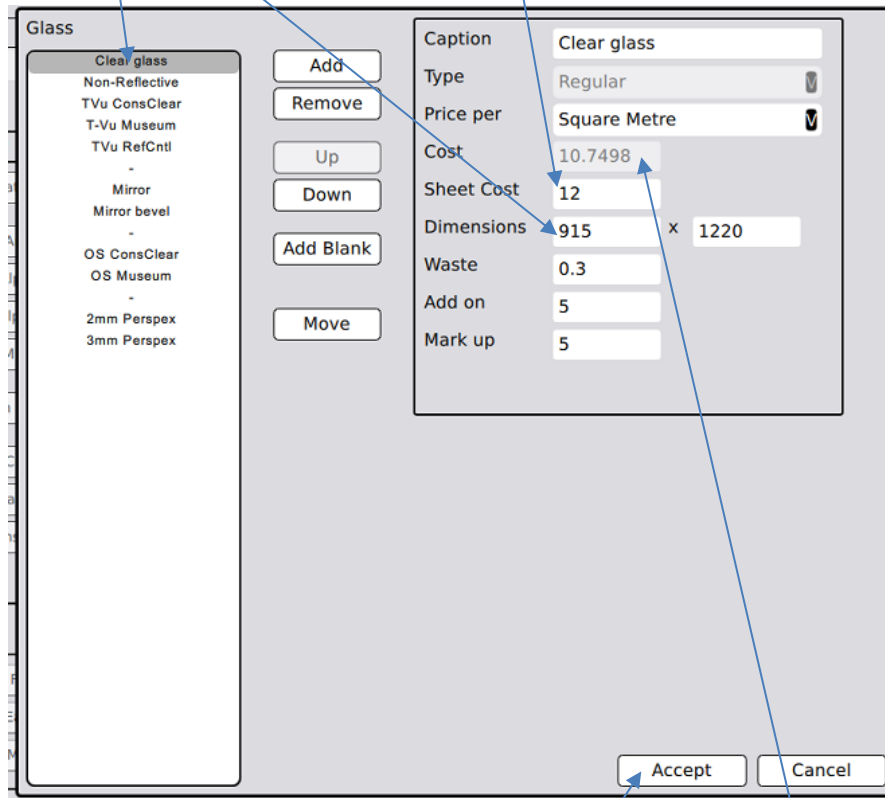

You will be presented with a list of buttons in that paddock:

You can add/remove or move any buttons in this list up or down, or move to another 'paddock'.

**To edit the pricing in any of the listed buttons:**

Example – Select Clear Glass button. Change the sheet price to what you pay the supplier (excl. GST). Change the sheet size width and height to the supplied sheet size.

Provided the "Price per" is set to Square Metre FSv6 will calculate the cost price per square metre for use in the pricing calculations. Other "Price per" options are 'Linear metre' (for frames etc.), or 'Flat Rate'.

"Accept" the changes when you've completed all changes in this paddock. It is not necessary to Accept after each button change.
